

# Documentation

For forest cover type prediction, the modelisation is given by :

1. a feature selection for categories
2. a feature selection for numerical data
3. a projection in an orthonormal space by PCA
4. a SVM Classification with a gaussian kernel and  $C = 1000$

The construction of the model is on my [git repository](#)

The result on the competition reach a score at 0.72076
